#### Heads Up: Thornton is in Drought Watch

Colorado's semi-arid climate means we must always be prepared to activate our <u>Drought Response Plan</u>. While we continuously monitor storage supply, you can start helping us stay a few drops ahead by keeping your water efficiency top of mind during "Drought Watch." You can always check the current drought status and restrictions on our <u>Restrictions & Drought</u> webpage.

Looking for a few ideas to save water - and money - in your home? Check out some tips below!

- 1. Water your lawns no more than three days/week, between 6 p.m. and 10 a.m. Use the cycle & soak method to get the most out of your irrigation schedule.
- 2. Address leaks as soon as possible. If you need help with a pesky leak (or finding hidden ones), check out our <u>Hidden Water Waste Demistified fact sheet.</u>
- 3. Replace older toilets, shower heads, and other appliances with water-efficient models. Our website offers residential rebates and services to help.

## Slow the Flow with Resource Central

Now through September, residential appointments are available for a FREE sprinkler consultation with a trained expert! Learn more about your irrigation system, reduce water waste, and stop money from spilling out of your pockets. Plus, Resource Central's associates will set up a custom watering schedule that best fits your outdoor space's needs - and your needs, too.

Appointments are first-come, first-served. Schedule your sprinkler consultation with Resource Central today to start saving.

Slow the Flow with Resource Central to optimize your outdoor water use and help save your green - in more ways than one.

## Take Advantage of Resource Central's Lawn Removal Program!

Don't worry - removing your lawn isn't as daunting as it seems. With <u>Resource Central's Lawn Removal Program</u>, you can turn your outdoor space into a perennial oasis. Making the switch to water-wise plants can help you save money spent on outdoor watering, save the time used on lawn maintenance, and help our environment along the way - including Colorado's friendly pollinators!

Here's how it works:

- 1. Measure your outdoor space of at least 200 square feet and determine sun exposure.
- 2. Take photos.
- 3. Submit an online application.
- 4. Connect with Resource Central about your lawn replacement project.
- 5. Let Resource Central remove your lawn or do it yourself.
- 6. Adjust or convert your irrigation system.
- 7. Pick up your Garden In A Box and plant your water-wise oasis.
- 8. Sit back and take in your new outdoor space!

**Before** 

**After** 

Resource Central's Lawn Removal Program can take your water-draining and money-wasting outdoor space to a water-wise, environment-friendly, perennial-filled dream.

### Plant of the Month: Avalanche White Sun Daisy

These crisp white flowers are the perfect way to cool off from this August heat! Despite its chilly-feeling name, the Avalanche White Sun Daisy is not a fan of the winter. This water-wise perennial blooms long, stark petals from spring to late summer and does well in clay and sandy soil. Plus, they are a perfect garden friend to our Colorado pollinators. Learn more and find a distributor from the local nonprofit Plant Select!

The Avalanche White Sun Daisy can grow up to 14 inches tall and requires little care for eyecatching blooms.
